GOLDEN RULE DAHLIAS

PATRONS are cordially invited to visit and inspect not only our flowers, but all operations at any branch of our farm and at any season. To see our flowers at their best, come during August and before September 15th, as we sometimes have frost in September. Our Dahlias start blooming in July.

Located 3½ miles north of Lebanon on the Lebanon-Dayton Pike (Ohio No. 48) the shortest route between Cincinnati and Dayton. We are 21 miles from Dayton and 33 miles from Cincinnati.

HARLEY T. PECK - Lebanon, Ohio

The Evolution of Golden Rule Dahlias

NEW RACE OF DAHLIAS is being developed at Golden Rule Farm. Each season we are adding to our list of varieties, which with reasonably good care and conditions, are practically free from disease, stunts, etc., and can be relied upon to produce good flowers in abundance. These consist for the most part of those varieties, the foliage of which is more or less unattacked or unharmed by the leaf hopper during hot weather conditions. Those varieties which do not possess these reliable qualities are discarded.

This plan started five years ago when we realized the important fact that there was a great lack of the proper kind of information in Dahlia catalogues. Only a limited proportion of purchases of new Dahlia varieties provided a satisfactory succession of blooms during the Dahlia season. The Dahlia in spite of the fact that it was the most varied, wonderful and useful of all flowers was in danger of losing friends, especially in the hotter interior sections of the country. Therefore, in 1925, we published a rating of each variety offered. This was the first rated Dahlia catalogue. Since, we have each year enlarged and improved this feature until now our Table of Ratings will be found to give more useful information than can be discovered elsewhere.

The most important quality of the modern Dahlia is its degree of resistance to the leaf hopper. We specialize in varieties which possess this resistance. No matter how adverse the weather or the insects may be, our fields every year present a beautiful array of countless large flowers from July until frost. In addition we have started to specialize in varieties which are best adapted for cut-flower purposes.

We believe that the Dahlia is the most satisfactory flower for all classes and should therefore be thus aided in reaching that place in the public's esteem which it eminently deserves. This result is now coming to pass; the Dahlia is being grown more extensively every year in all sections of the country and all over the world.

To Use the Table of Ratings

N the following tabulation each large-flowered variety of Dahlia is rated on the scale of 100 points for perfection for seven most important qualities. Pompons and miniature dahlias are not rated. In the rating for Beauty, the variety is compared only with others of the same type and color. In arriving at the other ratings all large-flowered Dahlias are compared.

For generally good and most reliable results, especially in a hot climate we recommend the purchase only of those varieties which have an average rating of 85 or more. These will be your best investment. For certain specific purposes, those rating under 85 may be found excellent, especially in sheltered gardens, and in more favorable climates.

Table of Ratings

Many new varieties are rated in this list each year, older ones have been eliminated and others have been omitted after they appeared but once or twice; others, standards of excellence may be found listed herein year after year.

Please note the ratings for Root Keeping. Varieties that make poor-keeping roots are always trouble makers.

Ratings given for new varieties are purposely conservative until longer acquaintance brings greater accuracy.

Guarantee

To every customer who is the sole and final judge in the matter, we guarantee satisfaction. Our greatest care and responsibility is to see that the customer gets what he pays for. If you ever have a complaint PLEASE let us know BEFORE July 1st.

Terms and Delivery

Cash with order. All stock shipped parcel post prepaid in late April and early May unless otherwise specified. Green plants shipped May 10th to June 1st.

Free—15%—Free

Select free from this catalogue extra stock to the amount of 15% of your order. 15 cents for each dollar of your order. This does not apply to collections or varieties described as "new."

OLD GLORY

A NEW RACE OF DAHLIAS

The Golden Rule Introductions

HE characteristic of the new race of Golden Rule dahlias is merely that they possess sufficient vigor and resistance to hot weather and insects that they bloom steadily all summer and until frost. They fulfill the purpose for which they were created, namely to produce flowers, and do this even under adverse conditions. Originated as they are in a locality and situation severe on the Dahlia, this fact enables the originator to more accurately select the hardier ones from among the other seedlings.

The Table of Ratings has helped us to do this as much or more than it helps our patrons. Consult this table for the most accurate information ever supplied the public about Dahlias.

Features for 1929

GOLDEN ACRE, Hybrid Cactus, 1928.

(See illustration on page. 19)

A beautiful glistening golden yellow. Strontian yellow faintly tinted ochraceous orange and deeper in centre. Size 4 to 7½ in. Will keep excellently when cut. It is the brightest golden color in our fields. For sheer beauty, Golden agree is not surpassed by any other Dahlia. Uniform vigor, excellent keeping roots and flowers, a perfectly stiff stem, and a most beautifully attracting hybrid cactus formation set this flower apart from all others. Medium height. As a commercial flower it has no equal in its color class of golden yellow. In the 1928 Annual Dahlia Roll of Honor, Mr. Hart gave Golden Acre prominence as he best commercial novelty and a flower of extreme beauty. Tubers \$5.00 each

ROYAL BEAUTY, Dec., 1927.

Royal Beauty will keep longer when cut than any other large flower we know and it is surpassed by none for size. Pomegranate purple shading true purple at tips and to bordeaux at centre. 6 to 10 in. Long stems holding flower at right angles. There is a distinct royal purple cast to this very large flower, and in beauty it is supreme in its class and color. It is a sensation whenever seen. Dwarf plants.

RUTH YOST, Dec., 1928.

In spite of the large number of red Dahlias very few are reliable producers of flowers in our climate, therefore, Ruth Yost is a remarkable exception to this rule, especially since it is so large, 5 to 8 in. Midway in color between spectrum red and carmine, it is characterized by its perfect form, long stiff, erect stems, freedom and continuance of bloom throughout the season. It is a most excellent variety for exhibition, being both large and dependable as a keeper when cut.

Tubers _____\$2.00 each

Former Golden Rule Originations

AUREO, Hy. C. (1927)—Wax yellow shaded pompeian red. 6 to 8 in. But few Dahlias possess cleaner foliage or grow more uniformly natural throughout the heat of midsummer. In our record-breaking drought of 1928 this Dahlia proved its worth in the production of plenty of excellent flowers. Dwarf to medium \$1.00

CAVALIER, Dec. (1928)-Scarlet to spectrum red. The blooms are 5 to 8 in., very deep and for the most part facing upward always on stiff stems. One of the very largest reds. Extremely profuse. This Dahlia, Papillon and Judge Marean are the three most persistent bloomers and the most profuse of large-flowered varieties. It has done especially well in the East. Dwarf......\$2.00

DRIFTING CLOUD, Dec. (1927)—The excellent keeping qualities of the flower, the long, always stiff stems and the perfect position in which the flower is held make this a cut-flower of the highest merit. Color is ivory white on which pink is lightly touched and overlaid. Size 3 to 4 in. The plants bloom with profusion. This Dahlia is highly regarded in Tennessee. Dwarf to medium.....\$0.75

HEART OF GOLD, Hy. Dec. (1925)—See picture on page 14.... This wonderful variety is at times Hybrid Cactus except for its clear strontian yellow centre which is like a separate flower of Decorative form. The outer petals are flesh ochre to jasper pink. The abundance of easily kept tubers, great plant vigor, freedom of

bloom, large size and keeping qualities of its fine flowers, make
11 tor the exhibition tone of mount of

PRIDE OF BUTLER, Peo. Fl. (1928)—Unlike so many so-called
Dahlias, this one is of the true type, and more-
of the brightest autumn tint, the red, brilliant nopal to scarlet
and of the swamp maple leaves in autumn. Base and tips light
magnish wallow and splashed vellow. Reverse, citron yellow. It
has resistance to thrip and good-keeping qualities when cut. All
previous varieties in this color which we have tried have been
discarded. Medium to tall. Flowers 5 to 7 in
STAR BRIGHT, Dec. (1928)—We tried out for years clear yellow
Dablize hailed as the best in their class but one by one they were
discarded or merely endured. None would bloom through the
heat of late July and early August. Then Star Bright first shone
and season after season steadily produced its flowers of purest
lamon wellow from early July till frost. It has never varied in its
norformance The comment that Star Bright always produces
flowers comes regularly from patrons who choose it. 5 to 8 in.
Stems, stiff and erect
STILL WATER, Dec. (1928)—This is the Golden Rule Dahlia for the
lean soil and very open situation. Having a perfect formation
and a long perfect stem, it is remarkable in its freedom of bloom
under trying conditions of drought and heat. We believe it needs
the more exposed situation to do its best, however, and that in part
shade and richer soil it will at times throw single flowers. On
our fields it is remarkable in its performance and perfection.
Citron yellow to naphthalene yellow, each petal overlaid with
varying quantities of phox purple. Leaves of a texture and color
resembling a rubber plant. 6 to 8 in. Medium height and uniformly

Dahlia Types

DECORATIVE (Dec.)—The most generally grown and most popular. Double, large petals.

CACTUS, (Cact.)—Double with rolled or pointed petals.

HYBRID CACTUS Hy. C.)—Midway between (Dec.) and (Cact.). Ends of petals rolled or pointed.

SHOW OR BALL (S.)—Old fashioned double with quilled petals.

POMPON (Pom.)—Tiny ball Dahlias.

PAEONY-FLOWERED (Peo. Fl.)—Two or more rows of large petals surrounding an open centre. Shorter curled petals about centre.

Decorative (Dec.), Hybrid Cactus (Hy. C.), and Cactus (Cact.) Dahlias

AL KORAN, Dec. Davies -Strontian yellow shaded amber. 5 to 8 in. Extremely
beautiful. Tall
AMBER GLOW, Cact. (Boston)—This cactus is distinguished by its uniform
vigor and floriferousness at all times. Clear orange, 4 to 6 in. Tall. \$0.50
ALICE WHITTIER, Hybrid Cactus (Reed)—Clear sulphur yellow. Extremely
large, 8 to 10 in. Very vigorous and unusually resistant to leaf hopper.
Tall. Tubers \$4.00
Plants \$2.00
AMUN RA, Dec. (Seal)—A glorified coppery bronze. There is nothing quite
so brilliant in these shades. 5 to 10 in. Tall. \$0.75
AMARILLO GRANDE, Dec. (Broomall)—New yellow decorative, shaded
of enormous size and great beauty
ANDREAS HOFER, Cactus. New European salmon pink cactus. Medium
height\$1.50 AVENIR, (Cact.)—Bright pink. Very reliable. Tall\$2.00

Propagation by Green Plants and Its Effect Upon Vigor

T one time we subscribed to the belief originated by others, that propagation by green plants was the prime cause of Dahlia weaknesses or disease commonly called "stunt." However, having been identified all our life with chemical research, has taught us that no effect is the result of a single cause but of several or many causes. This is a fact generally recognized by research workers the world over. Stunts or abnormally weak growth in Dahlias is no exception to this rule.

Even though it is too a fact that propagation can be carried to such an extreme that weaknesses may result, there is still no proof that malpractice in propagation is the cause of Dahlia stunts any more than the malpractice of over-fertilizing with nitrates or the malpractice of planting on poorly drained soil in a wet season. Common

sense must be used in all things for the best results.

Also there has been the malpractice of disseminating new varieties of a low degree of natural vigor before having them tried out in other and more severe climates. Fortunately these weak varieties, which stunt from no apparent cause, are rapidly being eliminated. The life of a good Dahlia variety such as Mrs. I. de Vere Warner and Judge Marean is long.

Very few Dahlia varieties have contributed as much to the World of Flowers than has Jersey's Beauty and it is doubtful if it can be saidwith truth that any variety has been propagated more from green plants than has Jersey's Beauty. It is becoming the standard pink for

cutting all over the world.

Also we have read or have been told that the old Dahlia, Countess of Lonsdale, was at one time propagated to the greatest of extremes. We have been growing it for years and have never seen a stunt nor has anyone told us of such. A method of propagation that some varieties can stand without stunting and others cannot, certainly should not be condemned, and it would also seem more important and logical to introduce new varieties with more care to disseminate only the more naturally vigorous ones than to reject as unworthy a method of propagation so widely used and upheld by such an authority as the late Mr. Vincent.

If one group of Dahlia growers frowns upon green plant propagation and another group boosts it, it is a safe bet that the truth lies between the two extremes. We have acted accordingly and after four years of experimenting have evolved a superior method of growing green plants that gives us normal results, both in flowers and tubers. We guarantee our plants to do everything that a good tuber will do and produce roots that can be wintered as easily as if grown from tubers. Moreover our method is conservative, fully conserving the natural vigor of the variety.

Cultural Directions

Best Planting Time for Dahlias in Ohio-May 1st to June 15th

E are convinced that the two most important rules for successful growing Dahlias are: (1) Have the soil well drained. (2) Do not over-fertilize. The use of nitrates or of too much manure from barnyard or hencoop may give good results one season and result the following season in little or no flowers and loss of tubers. The people who not only grow good flowers from Dahlia tubers, but also keep their roots over winter are those who fertilize moderately. A soil too rich in nitrogen also seems to favor the growth of insect parasites that today are the greatest menace to all plant life.

FERTILIZING

Fertilize with Peck's Dahlia Fertilizer

For this purpose we have developed, after years of experiments, a fertilizer that is eminently adapted for the fertilizing of Dahlias either mixed with the soil at planting or as a top dressing during the blooming season, and will develop good tubers as well as flowers.

PECK'S DAHLIA FERTILIZER will be delivered at \$6.00 per 100 lbs., \$2.00 per 25 lbs., \$0.50 for 5 lbs. Should be applied at planting time at the rate of 50 lbs. per 1000 square feet, well mixed with the soil again when plants are about 1 foot high and thereafter at 3 or 4 week intervals during the blooming season, up to September 1st.

This fertilizer is a well-balanced food, especially developed for Dahlias and will produce the best results without the addition of any other plant food. It contains rare fertilizing elements not found in any other fertilizer and which are needed by the Dahlia for the most vigorous and disease-resisting growth.

PLANTING

Plant the tuber horizontally when the ground is dry enough, not less than three and one-half feet apart, three inches deep in heavy soil and four to five inches in light soil. A stake should be driven in before planting. Cover the tubers, firming well. The plant should appear within a month, if not, investigate and if blind (no sprout) notify the one from whom you purchased the root. Cultivate early and often until the plants show buds, then start fertilizing and disbudding.

Other points to be observed are: Humus in the soil. Rye sown in late fall and plowed under in spring is an excellent source of humus. Water only when urgently needed and then soak to a good depth. Mulch with straw or other litter between plan's after August 1st to conserve soil moisture. In a clay soil use all winter's coal ashes and mix well before planting. Much harm is sometimes done by cultivating deeply after plants start blooming. The fibrous system comes close to the surface of the ground and deep cultivation cuts these roots, thus weakening the growth of the plant. After blooming starts, cultivation should not more than scratch the surface.

Part of Field at Tennessee Branch, Knoxville

The Dahlia as a Cut-Flower

HE Dahlia when properly grown and handled will keep as a cut-flower longer than most flowers.

Burning or scalding the ends of the stems, carefully and

properly tested, has been found to be of no benefit.

In warm weather cut Dahlias in the morning before the dew has evaporated, the earlier the better. Avoid cutting in the heat of the day. Cut the flowers with two or three joints of the branch as a stem, trim off as many leaves as you can spare.

Place as quickly as possible deeply in cool water in a clean vase. If the end of the stem becomes dried it should be freshly cut before placing in water. Visualize what the flower has to do to keep fresh. It has to pump water up the stem to supply the evaporation at the petals.

Leave the flowers in water in a cool place free from drafts for at least two hours before using. In general avoid strong drafts if you

wish cut-flowers to last well.

Disbudding

ISBUDDING or "suckering" is an important operation. Start from the top and work down, don't start disbudding at the base of the plant. When in June, July or August the plants first show flower buds at the top, select a vigorous bud which you wish to bloom, then take off the side buds and shoots on the first two or three joints down from the selected bud. Before this bud will have developed into a flower, other branches will have grown up from beneath and will be ready to disbud. Continue to disbud faithfully and it will repay you with more and better and larger flowers throughout the season. Most of the varieties we offer in this catalogue will naturally produce large flowers even without disbudding, but if not disbudded the later flowers may become smaller and with open centers. With faithful disbudding a constant succession of nice large blooms will be had. Cut off the old bloom as soon as the backs become unsightly. This stimulates the plant to produce new buds more rapidly and promptly.

Storing of Dahlia Tubers

OME have no trouble keeping the tubers over winter, while others lose some of their tubers due mostly to their becoming too greatly dried. We believe that the greatest loss of tubers

is due to their becoming too greatly dried on the day they are dug and during the first few days or weeks after digging and we recommend that they be not dug too soon after an early frost. November first is normally soon enough. It is not necessary to cut the tops off before digging. Dig carefully around the Dahlia plants, finally removing each clump with a good ball of earth. Cut the stem off short and dust it well with powdered sulphur or sulphur containing a little lime. Do not expose the tubers for any length of time to a drying wind or sun. Prompt action in following these directions may prevent loss of tubers. Store preferably in a cool basement near the floor but not in a wet place. If basement is warm, store tubers as far away from heat as possible and protect the clumps by packing in dry sand, ashes, leaves, sawdust, etc., and cover the whole container well, placing it as near the floor as possible. The container should be large enough to hold the clumps together with four to six inches of packing material on each side, underneath and on the top.

If one has a successful method of storing Dahlia tubers, we do

not recommend changing.

Inspection of the tubers at weekly intervals for the first month and at monthly intervals thereafter will often enable one to anticipate loss in storage and take steps to prevent it.

Call on us at digging time and see how we do it. It may pay you for some lose their tubers by poor methods of digging and do no realiz° it.

Fallen Stars

Dahlia growing is popular. A steadily increasing interest is taken each year, more people continually are joining the ranks of Dahlia fans, and almost none are leaving, except when taken by the Grim Reaper. Florists, the country over, are using more Dahlia each season.

Looking through old catalogues we are struck by the number of Dahlia varieties that are altogether vanished or are even now commencing to fall by the wayside. Nature's law of the survival of the fittest is in full operation upon the Dahlia. It is a healthy sign.

Yet, some of the older varieties persist. I remember I discarded many of these the first year I grew Dahlias in numbers. For example, A. D. Livoni, D. M. Moore and Maude Adams seem to persist. Yet, the former seems to have a more powerful rival in Princess Aline, and D. M. Moore will, without doubt, be superseded by one of many blackreds now coming along.

How long Mrs. I. de Vere Warner and Judge Marean will live is

yet to be known, but they are certainly going strong now.

There are many varieties that are introduced and with us, last but a year or two, three or four. Most of these are ones that do better in the locality that gave them birth, usually on either coast. Dr. Tevis, Dakota, Empress Eugenie, El Camino Real, John Alden, L. G. Manitou, La Favorita, Mr. Crowley, Pierrot, Shackamaxon, The Billionaire, Wizard of Oz, Bertha Jost, Cambria, Ebenezer, Halvella, Jeanne Charmet, Judge Langford, King Albert, Leora Creed, Liberty Bond, Mrs. Ackerson, Merritt, Pioneer, Rotarian, San Mateo, Shelikoff, Sylvia, The Millionaire, W. D'Arcy Ryan, Attraction, Allanah, Mrs. R. Lohrmann, Tom Lundy, Yellow King, Ambassador, Dorothy Flint, Elsa, Pearl Ruggles, Sweetheart's Bouquet and many newer ones have fallen and will not rise again at Golden Rule Farm.

Various causes have been responsible for their fall. Many could not compete in favor with the newer and more beautiful dahlias brought forth each year. Many just naturally got tired of combating this climate and petered out, getting weaker and less prolific in both tubers and flowers each year; (by the way this is the reverse of "acclimation," that too oft used expression) some stunted and were destroyed. Some of these are now being grown where the climate is more favorable and allows them to show up to better advantage in comparison with other varieties.

There are many other newer varieties than named above that lack resistance to our conditions and though top-notch at the place of their organization, fail to compete here. I find these each year among the new ones I try, yet it does not discourage us in the least, because we

FALLEN STARS

(Continued)

know they are inevitable. It also lends zest to the game by introducing the element of chance. If every variety introduced, were perfectly successful everywhere, the Dahlia would decay, wane and die for lack of interest. But with all of us striving to improve the Dahlia, there will be real and steady progress.

The new varieties will continue to rise and many will fall. The Law of the survival of the fittest must operate. Every so often a Mrs. I. de Vere Warner, a Jersey's Beauty or a Jane Cowl, Papillon or Judge Marean will rise and will shine for a long period of years in the gardens of the world. These will be the standards by which all new Dahlias will be judged.

A Reverie

Flowers are an important part of our lives, and, we are, of course, important to ourselves, yet we and ours are only an infinitesimal part of the great world of nature. The great outdoors comprises more than is on the surface of the Earth. Not so many years ago the whole world of nature as conceived by the human mind, encompassed, from the smallest imaginable particle, the atom of physics and chemistry, to the greatest, the universe of astronomy. And what immensity lay between these two points. Not all minds in effect, could really comprehend it. Now our horizon of knowledge is extended in both directions.

We have learned of proof that there is something smaller than the atom, which we believe to be composed of a nucleus and revolving electrons. These electrons revolve about the nucleus in orbits and at distances relative to their size, exactly as do the planets about their sun or star. It would seem that all matter is thus composed and the same system holds good throughout. Every chemical substance, such as water or a diamond is thus composed of atoms; tiny solar systems. How wonderful this is.

Then on the other hand, the universe of stars seen on a clear night is even more wonderful because so immense. And we now believe that beyond the universe lie other universes and so on through space. As the tiny systems of the atoms compose solids and liquids on the Earth, of what great fabric are the solar systems and universes composite parts? The Great Fabric of the Omnipotent with its laws of Nature, universes without end.

Perennials

BERGAMOT—Red	\$0.35	each
COREOPSIS	.25	each
DIGITALIS, Foxglove	.35	each
DELPHINIUM, Golden Rule Hybrids-		
Selected, Double light or dark blue	1.00	each
Selected, Light or dark blue with pink or lilac tones	.50	each
Plain light or dark blue	.35	each
GAILLARDI GRANDIFLORIA		each
IRIS, Germanica, 12 varieties unlabeled, one each for	2.00	
Labeled	3.00	
LILIUM REGALE, ½ to ¾ in	.25	each
5 for	1.00	
Large bulbs	.50	each
LILIUM CANDICUM	.35	each
ORIENTAL POPPY, Orange	.50	each
PYRETHRUM, Painted Daisy	.35	each
VERONICA SPICATA	.35	each
SEED	,30	
REGAL LILY SEED, 1 pkt. (200 seed)		25c
GIANT DAHLIA FLOWERED ZINNIA, pkt		250
DAHLIA SEED-\$1.50 per 50 seeds of large flowered varietie		25c
the per so seeds of large Howeled varieties	28.	

Join The American Dahlia Society

This Society is invaluable as an inspiration to its members. The Quarterly Bulletins are full of information and enthusiasm about the Dahlia. The secretary is Mr. William J. Rathgeber, 198 Norton St., New Haven, Connecticut.

On receipt of \$2.00 annual dues we will be glad to propose you as a member.

This DAHLIA BOOK

is the result of a sincere and long existing desire to describe DAHLIAS so that the purchasers of tubers may the more surely select the varieties that will give them the best return for the money spent. The reader's comments accounted. You can this it us to make still further improvements next secson.
